

Compromised data places your team, mission, and all related missions at serious risk. At Cigent, our sole focus is safeguarding your data across all devices.

Cigent delivers data protection, coupling hardware encryption and advanced, patented data security software and firmware to protect mission data. Solutions are developed by a team with decades of real-world mission experience committed to supporting your mission requirements.

### Mission-First Approach

- Mission-specific, custom software
- End-to-end thought process
- Multi-Protection storage areas
- Insider detection, tracking, prevention

### Broad System Coverage

- PCs, Servers, Manned Vehicles, UxVs, Industrial Control Sys. (ICS), tablets/phones, IoT... any device
- SATA/NVMe, external, SD/MicroSD, PCMCIA, & embedded storage
- Custom firmware

### Experienced and Elite Team

- US citizens/cleared personnel (TS/SCI)
- Extensive experience with custom projects
- Average of 20 years' experience per team member
- Decades of overseas operations experience

The Cigent solution provides integrated hardware, firmware, and software capabilities to ensure the integrity of your mission-critical data. Features include:

- Three layers of encryption with PBA and MFA (automated or user-engaged)
- Protecting Data-At-Rest & in-use and automated emergency erasure with verification
- Full-spectrum protection from advanced data recovery vulnerabilities
- Hidden and read-only partitions and data
- Quantum computing attack avoidance
- Meet DAR compliance: CSfC, FIPS, NIAP, NIST, PM9-12, HIPAA, SoX, PCI

## The Cigent Difference

Experienced professionals with decades of expertise in mission-critical data recovery and sanitization, applying a mission-oriented approach.

- Expertise, knowledge, and technology going back to 1987
- The most advanced data recovery lab in the country
- US-based (“Made in America”) software development
- Sub or prime on multiple contracts
- Proven track record. Trusted reputation.

*“While numerous cybersecurity providers offer protection, few effectively shield data from infiltration. Enter Cigent – their solutions redefine data protection, offering unparalleled security while maintaining user intuitiveness and ease of management for IT and security teams, all with minimal overhead and cost. Backed by the real-world expertise of former intelligence officers, the team at Cigent brings a wealth of field experience and an unwavering commitment to achieving government missions and safeguarding our nation's interests. ”*
